### Introduction

Welcome to the 2010 Hungarian Datafile. Hungarian Railways are centered on the capital with lines radiating to all sectors of Hungary, providing international connections with Russia, Czech Republic, Austria, Roumania and the Balkan countries. Despite a well developed highway network the railway is growing in importance with more freight annually being transferred to rail and run by private companies. Although we try to make sure that the information is accurate, mistakes can occur so if you have any up to date information please let us know.

**Note:** I have reorganised the data into the old class order as information I receive is always relating to the old class which made it difficult to update and also MAV is now not very enthusiastic about the UIC numbering Scheme.
