

PALBRICK WAGON B46XXXX

Built to code 1/021-1/026 the Palbrick wagon was designed to carry house bricks. In 1950 an experimental wagon was produced using a Morten unfitted wagon underframe but was not very successful then redundant 'Medfits' became available and these were used to produce the standard Palbrick wagon. The sides were made of plywood with a metal stanchion in the middle and the box units had a pair of strengthened rectangular cut outs so the unit could be lifted in and out by a fork lift truck. By the 1960's most were out of use and out of the 1420 built only eight survive on BR metals, these being:-

B462732, B462783, B462748, B462788, B462753, B462760, B462771 and B462778. There are two in preservation B462763 (CLVR) and B462772 (MNR)
